Statistics for idaholab/HYBRID

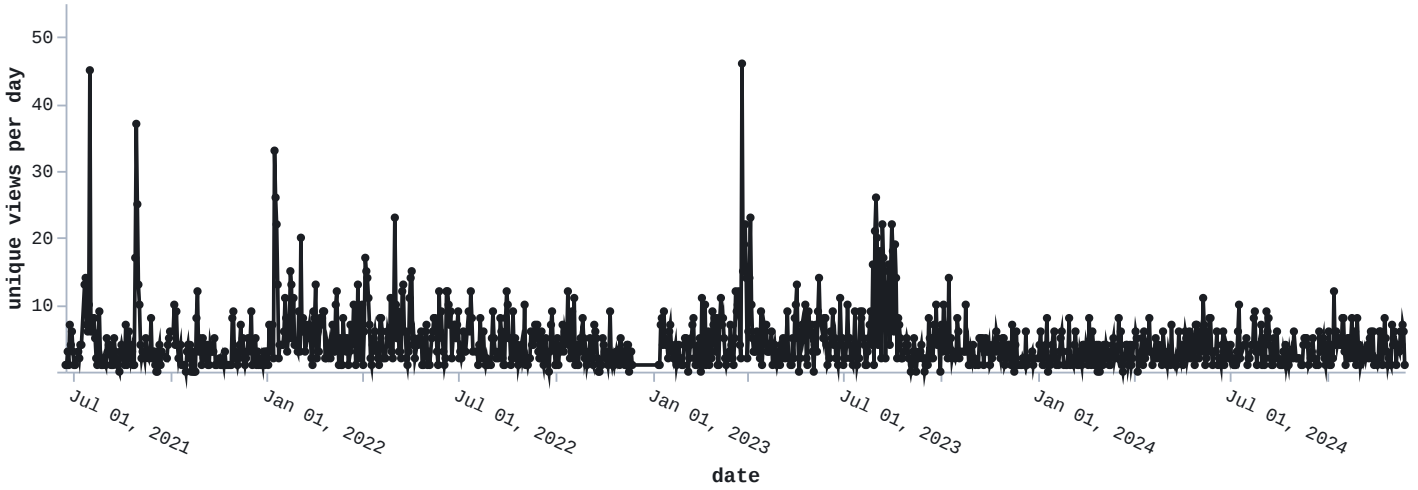
Generated for idaholab/HYBRID with jgehrcke/github-repo-stats at 2024-12-14 10:43 UTC.

Table of contents:

- Views
- Clones
- Stargazers
- Forks
- Top referrers and paths

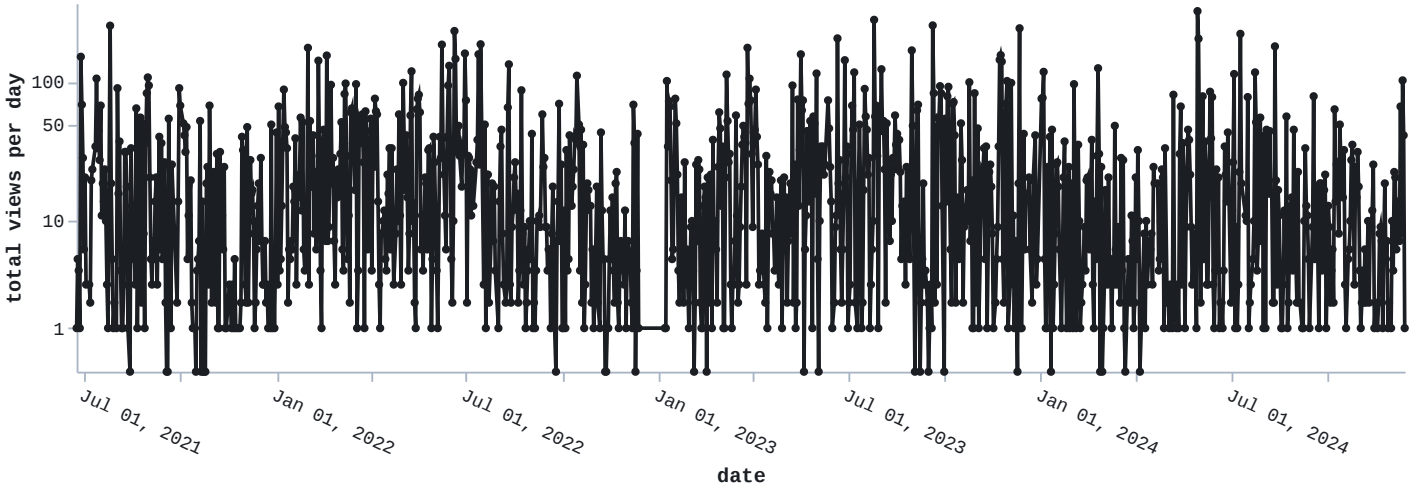
Views

Unique visitors



Cumulative: 5094

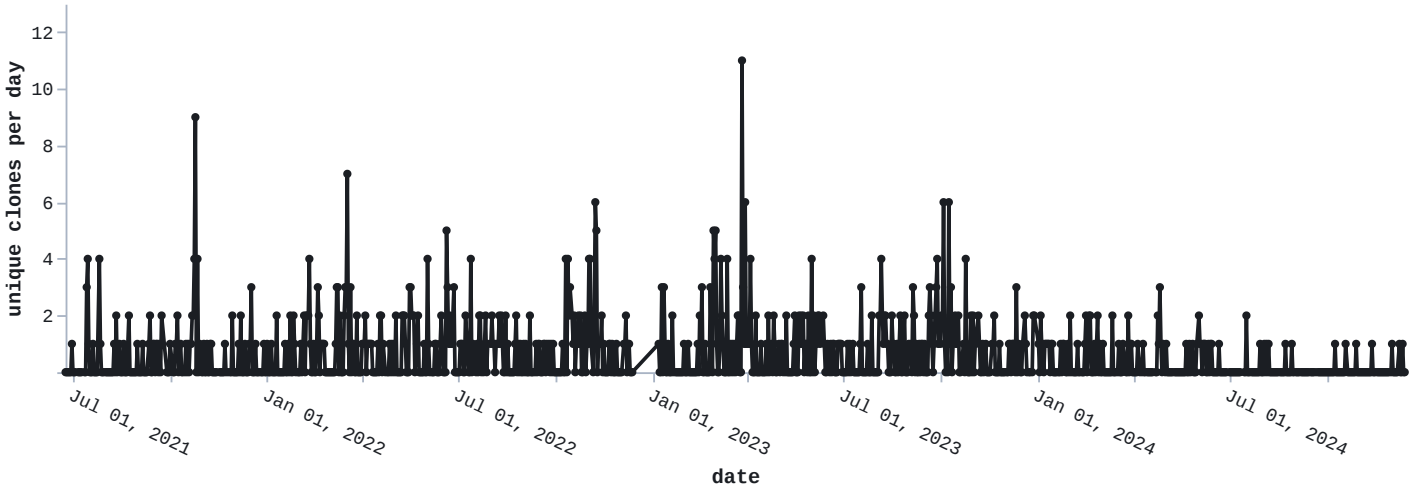
Total views



Cumulative: 27398

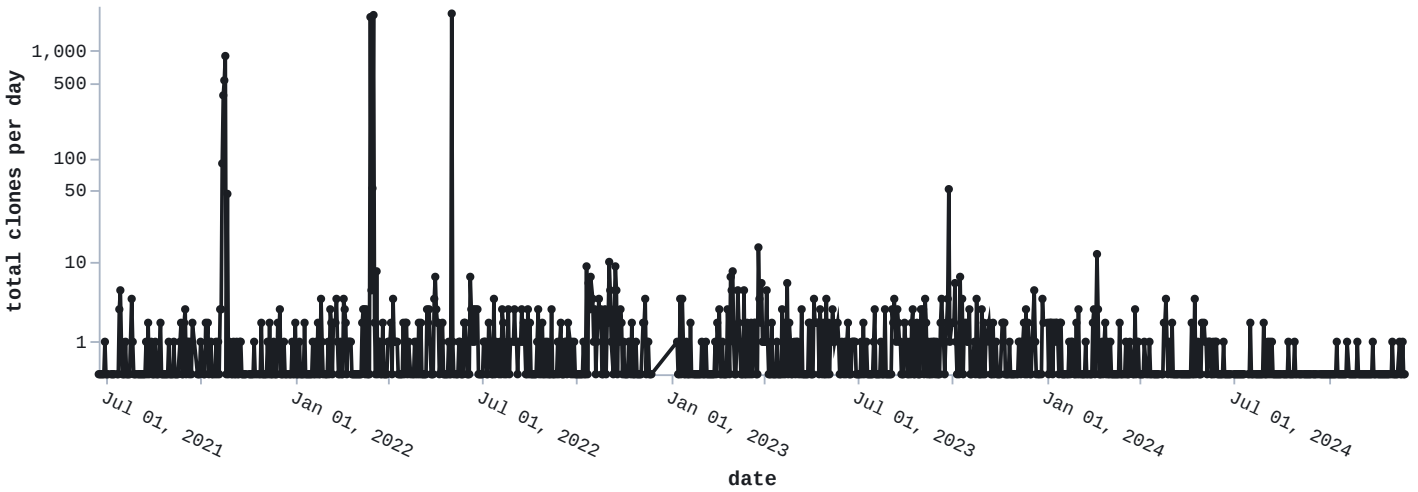
Clones

Unique cloners



Cumulative: 708

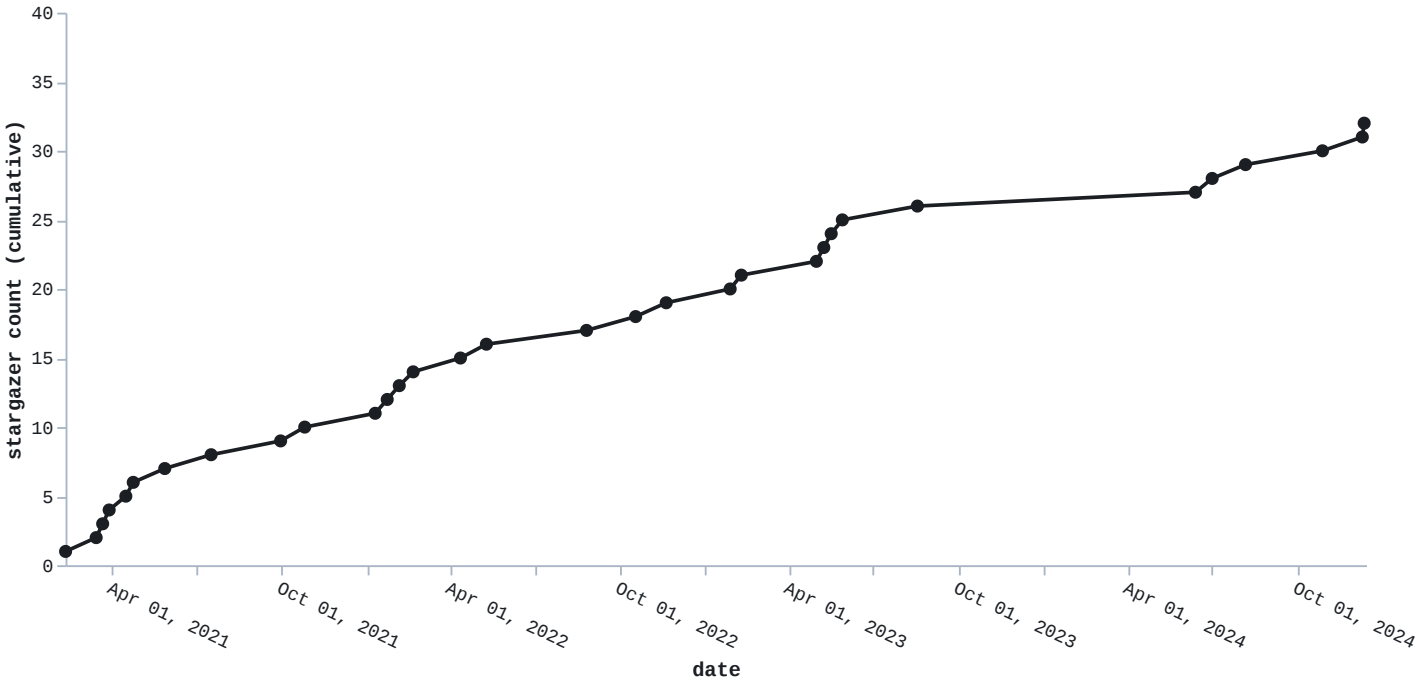
Total clones



Cumulative: 9296

Stargazers

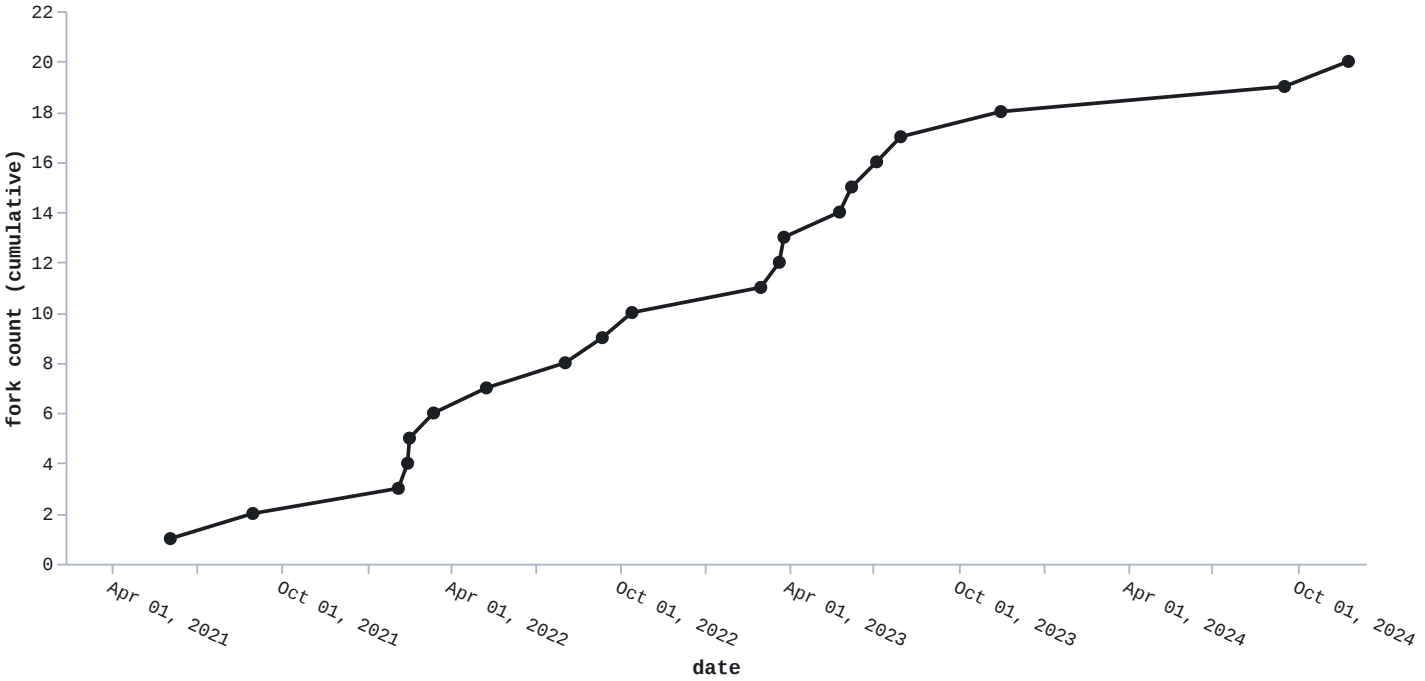
Each data point corresponds to at least one stargazer event. The time resolution is one day.



Note: this plot shows a larger time frame than the view/clone plots above because the star/fork data contains earlier samples.

Forks

Each data point corresponds to at least one fork event. The time resolution is one day.

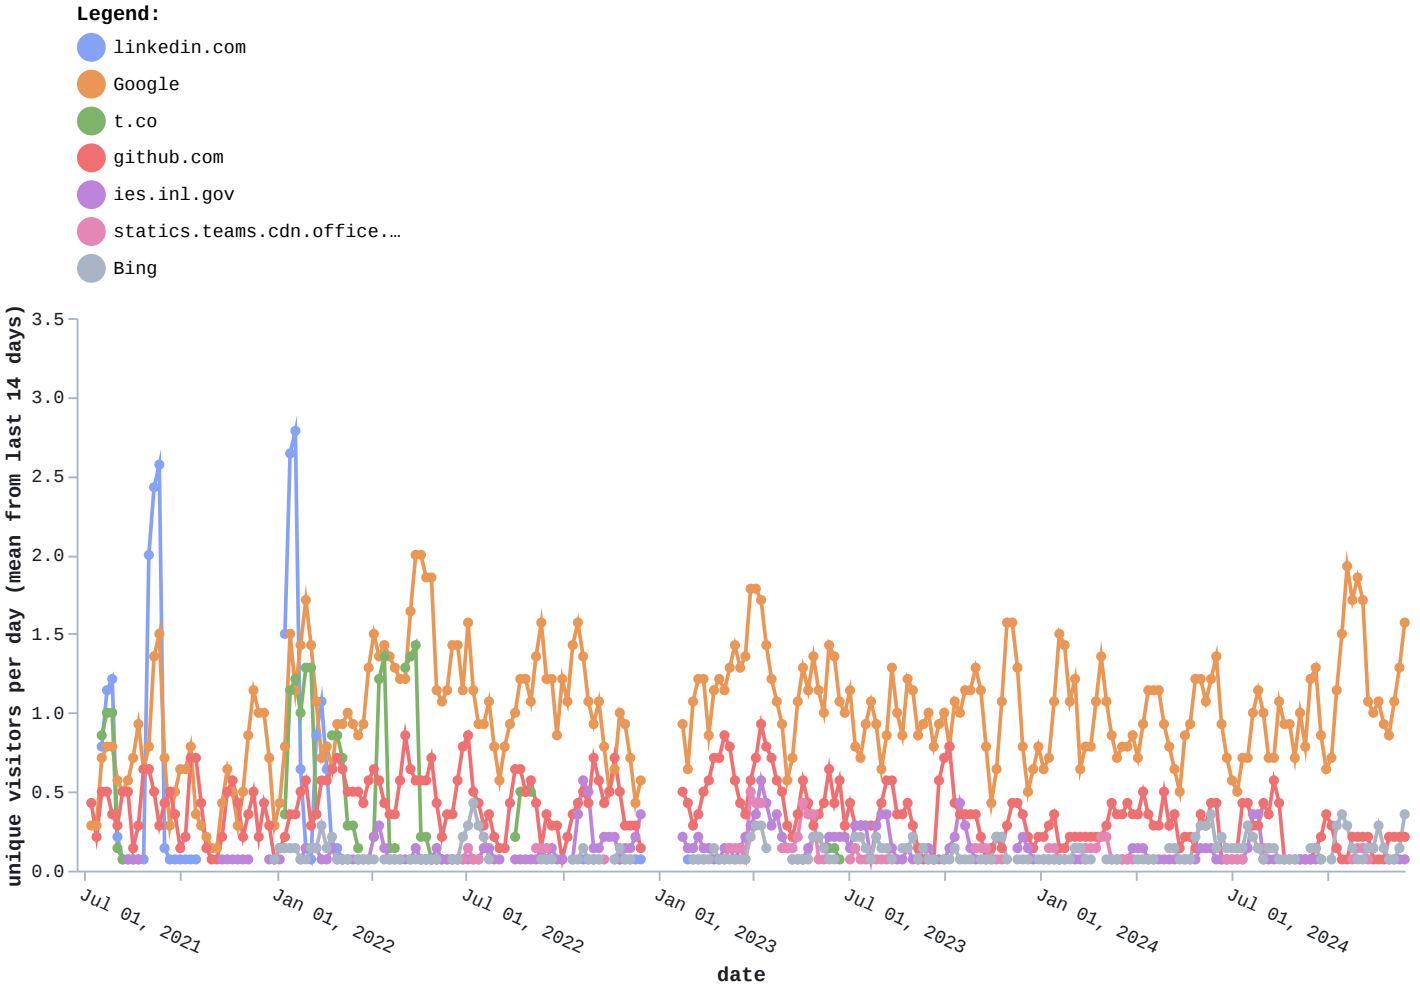


Note: this plot shows a larger time frame than the view/clone plots above because the star/fork data contains earlier samples.

Top referrers and paths

Note: Each data point in the plots shown below is influenced by the 14 days leading up to it. Each data point is the arithmetic mean of the “unique visitors per day” metric, built from a time window of 14 days width, and plotted at the right edge of that very time window. That is, these plots respond slowly to change (narrow peaks are smoothed out).

Top referrers



Top 15 referrers: 01: `linkedin.com` , 02: `Google` , 03: `t.co` , 04: `github.com` , 05: `ies.inl.gov` , 06: `statics.teams.cdn.office.net` , 07: `Bing` , 08: `iiasahub.sharepoint.com` , 09: `github-wiki-see.page` , 10: `iaea.webex.com` , 11: `sam.gov` , 12: `roundcube.rpi.edu` , 13: `com.linkedin.android` , 14: `cn.bing.com` , 15: `DuckDuckGo`
